

TICKET REDEMPTION GAME - 1 PLAYER

Ball Tower

One button. Three visible ways to win tickets.

Ball Tower turns one button press into a clear upward journey: regular ticket holes, an eight-light progress bonus, and a top ticket wheel. Players can follow the ball from launch to result, while operators can match the payout structure to their ticket economy.

WE DON'T BUILD MACHINES FOR WAREHOUSES.

We build for real arcade floors, real staff routines, and real player decisions.

How it plays

Three steps the player can understand from the cabinet.

1

Launch the ball

The player presses the illuminated button and the machine sends the ball upward.

2

Build a ticket result

The ball can land in one of eight regular holes while the matching lights build bonus progress.

3

Reach the top wheel

If the ball reaches the top entry, the ticket wheel stops on a value or the Super Bonus.

Why it works on the floor

The operating reasons behind the visible cabinet.

01

Clear from the front

Ball movement, ticket holes, progress lights, and the top wheel are all visible without a long explanation.

02

Adjustable payout structure

The program manages access to the top stage as part of the overall payout plan.

03

Eight-light replay hook

The progress display gives repeat players another visible target beyond a single play.

04

Ticket-system choice

The machine can be prepared for physical tickets or an e-ticket system.

Operator view & specifications

What staff manage, what procurement needs, and what should be confirmed.

DAY-TO-DAY OPERATING POINTS

01 Clear from the front

Ball movement, ticket holes, progress lights, and the top wheel are all visible without a long explanation.

02 Adjustable payout structure

The program manages access to the top stage as part of the overall payout plan.

03 Eight-light replay hook

The progress display gives repeat players another visible target beyond a single play.

04 Ticket-system choice

The machine can be prepared for physical tickets or an e-ticket system.

CONFIRMED PRODUCT DATA

MACHINE SIZE

W854 x D1212 x H2385 mm

NET WEIGHT

250 kg

Physical ticket or e-ticket

CERTIFICATION

CE, UKCA

ORDER NOTE

Packing size, gross weight, CBM, and container quantities should be confirmed with the final shipping plan.

Fit the machine to the venue

A useful quote starts with the operating plan, not only the cabinet name.

WHERE IT MAY FIT

- FECs with an established redemption counter
- Shopping mall arcades
- Bowling and indoor entertainment centers
- Venues using physical tickets or e-tickets

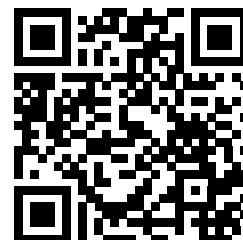

Confirm before production

These details affect setup, prize cost, service access, and shipment planning.

- 1 Physical ticket or e-ticket setup
- 2 Play price and target ticket economy
- 3 Bonus and mercy-ticket settings
- 4 Payment-system interface
- 5 Voltage and destination requirements
